# CT Image Analytics for COVID-19

The technology for CT image analysis powered by deep learning algorithms, was trained on 5000 CT volumes and has been tested in hospitals throughout China. It is able to predict the probability of COVID-19 pneumonia and common pneumonia based on the input CT images.

## CT Image Analytics for COVID-19

---

- **5-15 minutes** for a doctor to interpret each CT scan
  - **3 to 4 seconds** with the assistance of the technology
  - Accuracy: about **96%**
  - the best way to alleviate the shortage of test kits
- 60 times faster

## What is GMCC

---

1. The Jack Ma Foundation and Alibaba Foundation jointly established the Global MediXchange for Combating COVID-19 (GMCC) programme.
2. The platform can provide frontline medical teams with the necessary communication channels to share practical experience and information about fighting the pandemic.

★ Click here to enter : [alibabacloud.com](https://alibabacloud.com)

# Main Parts

---

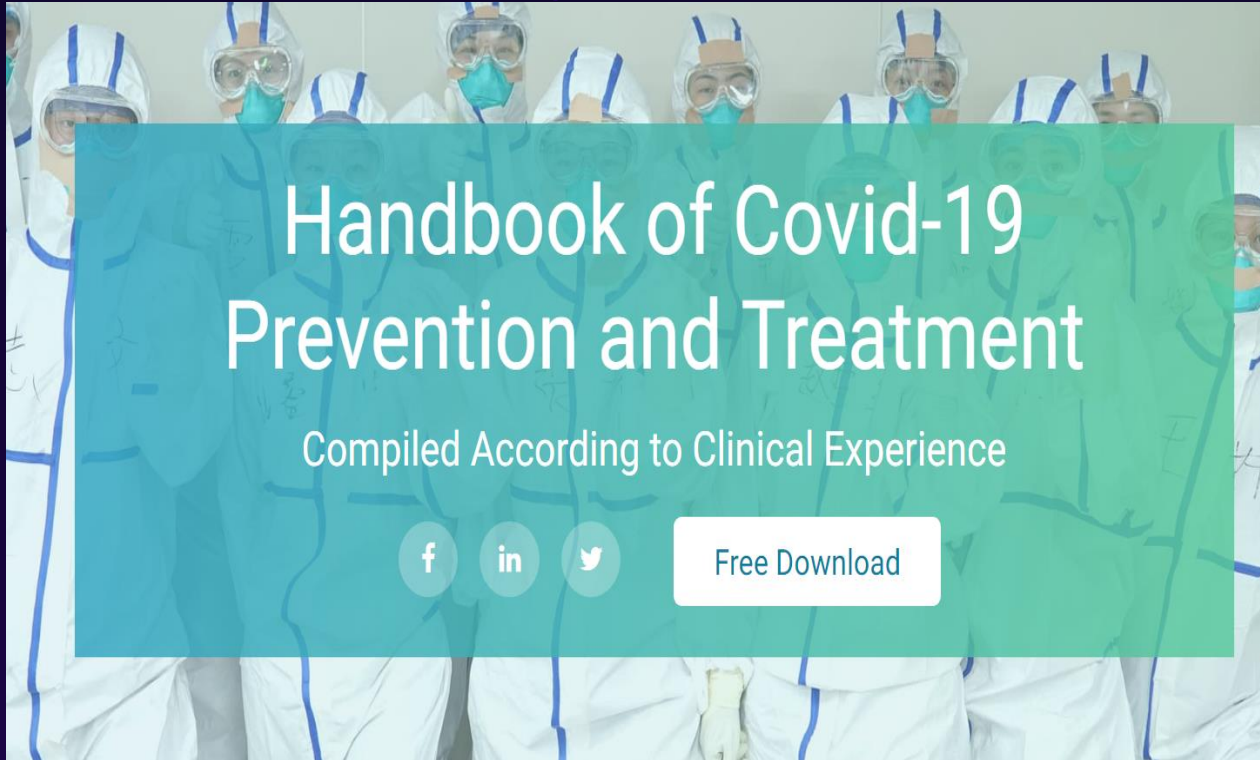

1. Resource sharing
2. Medical expert communication
3. Fighting against COVID-19 through technology
4. Join GMCC

## 2.1 Resource Sharing

---

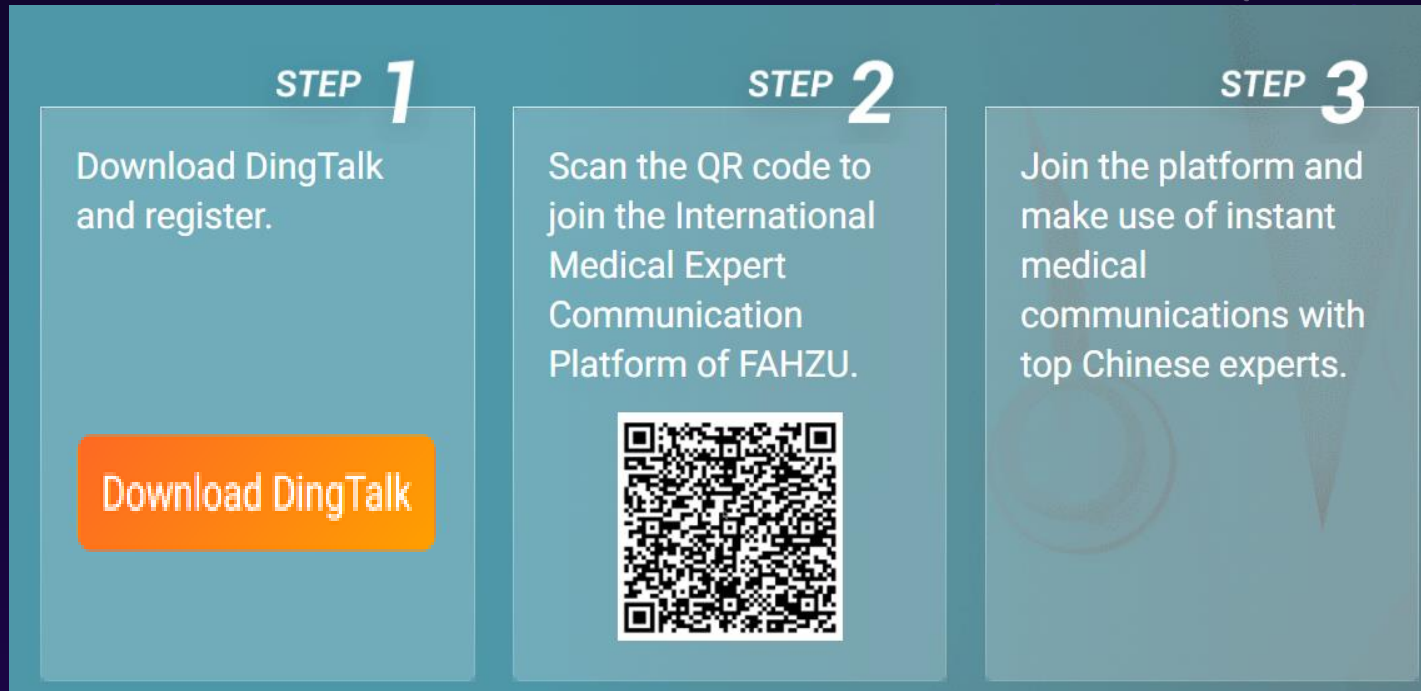

- The handbook focuses on the real-time hotspots of the COVID-19 epidemic. It provides detailed and comprehensive answers to potential questions for diagnosing and treating patients in different types, which are extremely helpful reference for medical workers in other countries currently in the early stages of the outbreak.

You can read the handbook online or download it for free.

## 2.2 Medical expert communication

---

Three steps to join the platform

- The International Medical Expert Communication Platform is a global online exchange platform for doctors. Workers in different countries and regions can communicate and cooperate online, refer to the COVID-19 treatment experience of Chinese doctors, so that they can treat patients in a timely manner.

2.3

## Fighting against COVID-19 through technology

---

- Free High Performance Computing platform, AI platform and other services are provided to help global scientific research institutions accelerate the development of COVID-19 drugs and vaccines; support global medical institutions to improve CT imaging diagnosis and virus screening and diagnosis; and provide reference for policy makers in pandemic prediction.
